Quality Products Since 1916

**Addendum to Standard Conditions of Sale 2005
For CNC Machined Parts Delivered on
Coated and/or Uncoated Flat Sheet Material**

May 31, 2005

The products covered by these Special Conditions are parts cut and delivered **on the strip or sheet** to the customer. They specifically apply to the defects that are **beneath the masking** of a coated or uncoated part over which are beyond our control. The "under the masking" defects are defined as cosmetic surface and internal material defects. They do **not** apply to the mechanical specifications of the part.

G-S PLASTIC OPTICS works diligently to source the industry's highest quality materials and coatings. All material received from vendors, **whether coated or uncoated**, has protective masking applied to its surfaces. G-S inspects and monitors all sheet material received from its suppliers with respect to quality trends in surface and material appearance. Under the protective film there may appear unpredictable, random cosmetic defects either from the coating, if any, or already on the surface or in the material, which are beyond our control.

Return Policy:

All parts manufactured and delivered **on strips or sheets** are sold with the understanding and agreement of the above conditions. Credit will **not** be issued for **under the masking** unpredictable, random cosmetic defects, whether the material is coated or uncoated.

Products that do not meet mechanical specifications are subject to our standard return policy. Please see our Conditions of Sale 2003, Section 9.
